For audio input and charging simultaneously after connecting a computer. Can also be used for charging.

How to Use

USB Connection

Connect the speakerphone to your computer with a USB-C cable. The "Bobby Pro" model will appear on the computer while it's connected, which enables charging and transferring audio.

NOTE:

The computer only can charge the unit if you use a USB-C charging cable which does not support data and audio.

Analog Audio Connection

Connect your smartphone, tablet or computer to the IN port of the speakerphone with a 3.5mm TRS cable to transfer audio.

Bluetooth Connection

2. Turn on the Bluetooth feature on your device. Select "Blobby Pro" from the device list.
3. Once paired, you hear "Connected" and the indicator lights static blue.

Note:

- The Bluetooth will be disconnected when the device's Bluetooth feature is turned off or the operating range exceeds. You hear "Disconnected" and the indicator blinks blue slowly. The speakerphone goes into pairing mode automatically after about 5 minutes.
- To disconnect a paired device, press and hold the Bluetooth pair button  for 3 seconds to enter pairing mode again. The connection can be re-established by pressing the Bluetooth button once.
- If the connection is not established within 10 minutes in pairing mode, the speakerphone will automatically power off.

Connection with Two Devices

For Blobby Pro, up to two devices (a USB device and a Bluetooth device, or a Bluetooth device and a 3.5mm TRS device) can be connected to the speakerphone at once.

Note:

- After the speakerphone is connected to two devices, only the sound of one device can be played. Sound from the devices is prioritized as follows: USB > Bluetooth > 3.5mm TRS. (That is, while a USB device and a Bluetooth device play audio simultaneously, priority is given to the audio output through the USB port, and audio output from the Bluetooth device is disabled. While a Bluetooth device and a device connected to the 3.5mm TRS Input jack play audio simultaneously, priority is given to the audio output from the Bluetooth device, and audio output from the other is disabled.)
- Under USB mode, if your phone receives an incoming call, the audio on your phone will be switched to the speakerphone automatically. After the call ends, the USB mode will be automatically resumed.

Cascade Control

1. With the cascade cable (available separately), you can connect two Blobby Pro speakerphones via the OUT/LINK port, which ensures that the microphone and speaker sounds of two devices are combined to have large meetings with up to 15-30 participants.
2. The one connected to your smartphone, tablet or computer via USB or Bluetooth connection is the master, and the other one is the slave. The speakers and microphones of the two devices are synchronized to one another. The slave's mute feature may be controlled by the master (NOTE: The master's mute feature cannot be controlled by the slave.)
3. Access a video-conferencing app on your device, then start a meeting.

Audio Output

Plugging your speaker or headphones into the OUT/LINK port to monitor your audio or transfer audio of your smartphone/ computer on a conference call.

Sound Localization

When the speakerphone is connected to a device, Sound Localization will be enabled automatically which can help you determine the orientation of the person speaking in a conference room.

Note:

If your speakerphone were not connected to any device, its Sound Localization would not be displayed on the ring light.

Smart Audio Processing

The acoustic echo cancellation (AEC) and clear voice capture (CVC) features will be switched on automatically on a conference call. This makes it easier for participants to hear each other and reduces or eliminates echo in remote communication. Also, this will help pick up the talker's voice while filtering out background noise such as buzzing, which can help improve sound quality and make online communication smoother.
