Introduction

Thanks for choosing BOYA!

The BY-GM12 is a desktop-mounted gooseneck microphone with USB output. With the excellent cardioid polar pattern, the BY-GM12 can clearly capture the voice in front of the mic, designed to provide clear and intelligible speech reproduction for lectures, video conferences, meetings, and more.

The BY-GM12 features a clear status indicator and convenient mute. A 3.5 mm headphone output lets you monitor your audio in real-time, and a gain control knob allows you to adjust microphone input gain. The gooseneck enables you to precisely position the capsule in front of the speaker for optimal sound. The BY-GM12 runs off USB plug-in power. This means that no batteries are required to operate.
